

Breathing gland in plastic

Series 8162/9

www.stahl.de

- > Degree of protection IP54
- > Suitable for installation in 3/4" conduit hubs or drilled and tapped conduit openings
- > Replaceable felt insert
- > Condensation build-up in enclosure is kept to a minimum

16640E00

The breather is designed for ventilation where there is the possibility of moisture or condensation being trapped within an enclosure. They must be protected from severe impact.

Operating mode

Explanation of the breather operating mode

Temperature-dependent pressure differences between the interior of the enclosure (P1) and the external atmosphere (P2) are relieved by means of the breather. Condensation build-up in the enclosure is thus kept to a minimum.

Water which has penetrated the equipment drains out via the breather.
