

- For connecting eight (FISCO, Entity) fieldbus devices in Zone 2 and Class I, Div. 2
- Operated using High Power Trunk concept
- Reduced start-up current thanks to power management and short-circuit limiting with disconnection

MY R. STAHL 9411F

9411/24 series Ex i field device couplers for installation in Zone 2 and Class I, Div. 2 with galvanic separation can be used for interference-free connection of up to eight intrinsically safe FF H1 or PROFIBUS PA field devices on the High Power Trunk. The spurs with type of protection ia can be used for fieldbus devices in Zones 1 and 2 and Class I, Div. 2 and are protected by a short-circuit limiting function.

The integrated power management minimizes start-up and short-circuit currents.

Available with screw terminals or spring clamp terminals.

Electrical Data

Max. number of field devices per segment	16 (FF H1) 32 (Profibus PA)
Data transmission trunk and spurs	Passive No repeater function
Max. number of field device couplers	4 per trunk
Power Management	If the voltage on the trunk exceeds 16 V, the spurs are switched on consecutively in order to avoid a high start-up current through the field devices. If a spur short circuit is detected, the affected spur is disconnected until the short circuit is removed. The trunk is loaded with max. one short-circuit current, regardless of how many spurs are short-circuited. This minimises the current drawn by the trunk and the power dissipation under all operating conditions.
Fieldbus termination	The field device couplers have a built-in, connectable terminator 100 Ω + 1 μ F (IEC 61158-2). A jumper between the TERM 1 and 2 terminals connects the terminator to the trunk. As an alternative, it is also possible to use a Series 9418 external terminator at the trunk OUT connection.

Auxiliary Power

Max. power dissipation	1.8 W
Auxiliary power	Not required; the field device coupler is supplied from the trunk.
